Departmental
Findings of Fact and Order
Air Emission License

After review of the air emission license renewal application, staff investigation reports, and other documents in the applicant's file in the Bureau of Air Quality, pursuant to 38 M.R.S.A., Section 344 and Section 590, the Department finds the following facts:

I. REGISTRATION

A. Introduction

Kenneth H. Rockwood, DVM (Rockwood) has applied to renew the Air Emission License permitting the operation of a Class IV-A veterinary incinerator, to dispose of animal remains at his practice in Farmington.

B. Emission Equipment

Rockwood is authorized to operate a Shenandoah Model P16-20T with the following specifications:

Class Incinerator:	IV-A
Number of Chambers:	2
Type of Waste:	Type 4
Max. Design Charge:	350 lb/load
Auxiliary Fuel Input:	
Primary Chamber	0.325MMBtu/hr, #1 fuel oil
Secondary Chamber	0.325MMBtu/hr, #1 fuel oil
Emissions Control:	Afterburner

The incinerator combustion gases vent to a 20 foot AGL (Above Ground Level) stack.

C. Application Classification

Rockwood has not proposed the licensing of increased emissions or the installation of new or modified equipment, therefore the license application is considered a renewal of an existing licensed emission unit only.

Franklin County)
Farmington, Maine)
A-546-71-D-R 2

Departmental
Findings of Fact and Order
Air Emission License

II. BEST PRACTICAL TREATMENT

In order to receive a license, the applicant must control emissions from each unit to a level considered by the Department to represent Best Practical Treatment (BPT), as defined in Chapter 100 of the Air Regulations.

BPT for existing equipment means that method which controls or reduces emissions to the lowest possible level considering:

- the existing state of technology;
- the effectiveness of available alternatives for reducing emissions from the source being considered; and
- the economic feasibility for the type of establishment involved.

A. Equipment Specifications

The incinerator shall be operated and maintained to achieve an operating temperature in the secondary chamber and refractory lined stack at or above 1600°F with a stack gas retention time, at or above 1600°F, of at least 0.5 second. The incinerator shall not be operated without a properly functioning pyrometer.

To insure an efficient burn, and to prevent odors and visible emissions, the secondary chamber and refractory lined stack will be preheated, as specified by the manufacturer, until the pyrometer temperature measures a minimum of 1200°F prior to the commencing of the burn cycle.

Once the burn cycle has commenced by introduction of primary chamber combustion, the incinerator shall be operated in an efficient manner and as specified by the manufacturer for the period of time between preheat and reaching the set operational temperature to be a minimum of 1600°F as measured by the pyrometer. The temperature in the secondary chamber and refractory lined stack as measured by the pyrometer shall be maintained at or above 1600°F for the duration of the burn cycle.

A log will be maintained recording the weight of the waste charged, preheat time, charging time and the temperature of the secondary chamber every 60 minutes after start-up until, and including, final shutdown time. If a chart recorder is ever installed at this facility, the start time, date, and weight of waste charged may be logged on the chart.

A maximum particulate emission rate of 0.10 gr/dscf corrected to 12% CO₂ without the contribution of the CO₂ from the auxiliary fuel will be met.

Kenneth H. Rockwood, DVM)
Franklin County)
Farmington, Maine)
A-546-71-D-R 3

**Departmental
Findings of Fact and Order
Air Emission License**

Visible emissions from the incinerator shall not exceed 10% opacity based on a six (6) minute block average basis.

SO₂, NO_x, CO and VOC emission limits are based on the burning of #1 fuel oil and EPA AP-42 emission factors.

The ash will be disposed of in accordance with the requirements of the Bureau of Remediation and Waste Management.

The incinerator operator(s) shall receive adequate training to operate the incinerator in accordance with the manufacturer's specifications and shall be familiar with the terms of the Air Emission License.

B. Annual Emission Limits

Rockwood is licensed for the following annual emissions, based on a 12 month rolling total:

Total Allowable Annual Emissions for the Facility
(used to calculate the annual fee)

<u>Pollutant</u>	<u>TPY</u>
PM	0.48
PM ₁₀	0.48
SO ₂	1.44
NO _x	0.72
CO	0.10
VOC	0.01

III. AIR QUALITY ANALYSIS

According to Chapter 115 of the Maine Bureau of Air Quality Regulations, the level of air quality analysis and monitoring are determined on a case-by-case basis. Based on analysis for similar sources, the size of the source, the allowable emissions, the location, and the stack height, ambient air quality standards including increments, are not expected to be violated, therefore an ambient air impact analysis will not be required for this source at this time.

Departmental
Findings of Fact and Order
Air Emission License

ORDER

Based on the above Findings and subject to conditions listed below the Department concludes that the emissions from this above source:

- will receive Best Practical Treatment,
- will not violate applicable emission standards,
- will not violate applicable ambient air quality standards in conjunction with emissions from other sources.

The Department hereby grants Air Emission License A-546-71-D-R, subject to the following conditions :

- (1) Employees and authorized representatives of the Department shall be allowed access to the licensee's premises during business hours, or any time during which any emissions units are in operation, and at such other times as the Department deems necessary for the purpose of performing tests, collecting samples, conducting inspections, or examining and copying records relating to emissions.
- (2) The licensee shall acquire a new or amended air emission license prior to commencing construction of a modification, unless specifically provided for in Chapter 115.
- (3) Approval to construct shall become invalid if the source has not commenced construction within eighteen (18) months after receipt of such approval or if construction is discontinued for a period of eighteen (18) months or more. The Department may extend this time period upon a satisfactory showing that an extension is justified, but may condition such extension upon a review of either the control technology analysis or the ambient air quality standards analysis, or both.
- (4) The licensee shall establish and maintain a continuing program of best management practices for suppression of fugitive particulate matter during any period of construction, reconstruction, or operation which may result in fugitive dust, and shall submit a description of the program to the Department upon request.
- (5) The licensee shall pay the annual air emission license fee to the Department, calculated pursuant to Title 38 M.R.S.A. §353.

Kenneth H. Rockwood, DVM)
Franklin County)
Farmington, Maine)
A-546-71-D-R 5

Departmental
Findings of Fact and Order
Air Emission License

- (6) The license does not convey any property rights of any sort, or any exclusive privilege.
- (7) The licensee shall maintain and operate all emission units and air pollution systems required by the air emission license in a manner consistent with good air pollution control practice for minimizing emissions.
- (8) The licensee shall maintain sufficient records to accurately document compliance with emission standards and license conditions and shall maintain such records for a minimum of six (6) years. The records shall be submitted to the Department upon written request.
- (9) The licensee shall comply with all terms and conditions of the air emission license. The filing of an appeal by the licensee, the notification of planned changes or anticipated noncompliance by the licensee, or the filing of an application by the licensee for a renewal of a license or amendment shall not stay any condition of the license.
- (10) The licensee may not use as a defense in an enforcement action that the disruption, cessation, or reduction of licensed operations would have been necessary in order to maintain compliance with the conditions of the air emission license.
- (11) In accordance with the Department's air emission compliance test protocol and 40 CFR Part 60 or other method approved or required by the Department, the licensee shall:
 - (i) perform stack testing to demonstrate compliance with the applicable emission standards under circumstances representative of the facility's normal process and operating conditions:
 - a. within sixty (60) calendar days of receipt of a notification to test from the Department or EPA, if visible emissions, equipment operating parameters, staff inspection, air monitoring or other cause indicate to the Department that equipment may be operating out of compliance with emission standards or license conditions; or
 - b. pursuant to any other requirement of this license to perform stack testing.
 - (ii) install or make provisions to install test ports that meet the criteria of 40 CFR Part 60, Appendix A, and test platforms, if necessary, and other accommodations necessary to allow emission testing; and
 - (iii) submit a written report to the Department within thirty (30) days from date of test completion.

- (12) If the results of a stack test performed under circumstances representative of the facility's normal process and operating conditions indicate emissions in excess of the applicable standards, then:
- (i) within thirty (30) days following receipt of such test results, the licensee shall re-test the non-complying emission source under circumstances representative of the facility's normal process and operating conditions and in accordance with the Department's air emission compliance test protocol and 40 CFR Part 60 or other method approved or required by the Department; and
 - (ii) the days of violation shall be presumed to include the date of stack test and each and every day of operation thereafter until compliance is demonstrated under normal and representative process and operating conditions, except to the extent that the facility can prove to the satisfaction of the Department that there were intervening days during which no violation occurred or that the violation was not continuing in nature; and
 - (iii) the licensee may, upon the approval of the Department following the successful demonstration of compliance at alternative load conditions, operate under such alternative load conditions on an interim basis prior to a demonstration of compliance under normal and representative process and operating conditions.
- (13) Notwithstanding any other provisions in the State Implementation Plan approved by the EPA or Section 114(a) of the CAA, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any statute, regulation, or Part 70 license requirement.
- (14) The licensee shall maintain records of malfunctions, failures, downtime, and any other similar change in operation of air pollution control systems or the emissions unit itself that would affect emission and that is not consistent with the terms and conditions of the air emission license. The licensee shall notify the Department within two (2) days or the next state working day, whichever is later, of such occasions where such changes result in an increase of emissions. The licensee shall report all excess emissions in the units of the applicable emission limitation.
- (15) Upon written request from the Department, the licensee shall establish and maintain such records, make such reports, install, use and maintain such monitoring equipment, sample such emissions (in accordance with such methods, at such locations, at such intervals, and in such a manner as the Department shall

Air Emission License

- prescribe), and provide other information as the Department may reasonably require to determine the licensee's compliance status.
- (16) The incinerator shall be used for the disposal of type 4 (veterinary) waste and shall not be used for the disposal of any plastics (other than plastic bags containing veterinary waste), cytotoxic (antineoplastic) drugs or any radioactive wastes and shall not be used to dispose of any medical waste classified as type 7 waste, as defined in Maine Air Regulations Chapter 100.
 - (17) The incinerator shall not exceed the maximum design charge of 350 lbs per load. Auxiliary fuel input to the primary and secondary chamber shall not exceed 0.325 MMBTU/hr, and 0.325 MMBTU/hr respectively of #1 fuel oil.
 - (18) The secondary chamber and refractory lined stack will be preheated, as specified by the manufacturer, until the pyrometer temperature measures a minimum of 1200°F prior to the commencing of the burn cycle.
 - (19) Once the burn cycle has commenced by introduction of primary chamber combustion, the incinerator shall be operated in an efficient manner and as specified by the manufacturer for the period of time between preheat and reaching the set operational temperature to be a minimum of 1600°F as measured by the pyrometer. The temperature in the secondary chamber and refractory lined stack as measured by the pyrometer shall be maintained at or above 1600°F for the duration of the burn cycle.
 - (20) The incinerator shall not be operated without a properly functioning pyrometer.
 - (21) A log shall be maintained recording the weight of waste charged, preheating time, charging time, afterburner temperature directly after charging and every 60 minutes after startup until, and including, final shutdown time. If a chart recorder is ever installed, the start time, date, and weight of waste charged may be logged on the chart.

Farmington, Maine)
A-546-71-D-R **8**

Departmental
Findings of Fact and Order
Air Emission License

- (22) Rockwood shall not exceed a particulate matter emission limit of 0.10 gr/dscf corrected to 12% CO₂ without the contribution of the CO₂ from the auxiliary fuel. Based on this particulate matter emission limit, the waste stream content, the burning of #1 fuel as an auxiliary fuel, the use of EPA AP-42 emission factors, and continuous operation of the Class IV-A incinerator, emissions shall be limited to the following:

Incinerator Emission Limits

<u>Pollutant</u>	<u>gr/dscf</u>	<u>lb/hr</u>
PM	0.10	0.11
PM ₁₀	0.10	0.11
SO ₂	-	0.33
NO _x	-	0.16
CO	-	0.02
VOC	-	0.01

- (23) Visible emissions from the incinerator shall not exceed 10% opacity based on a six (6) minute block average basis.
- (24) The incinerator combustion gases shall vent to a stack of at least 20 feet AGL.
- (25) The ash will be disposed of in accordance with the requirements of the Bureau of Remediation and Waste Management.
- (26) The incinerator operator(s) shall receive adequate training to operate the incinerator in accordance with the manufacturer's specifications, and shall be familiar with the terms of this Air Emission License as it pertains to the operation of the incinerator.
- (27) Though it is not being required now, the installation and operation of continuous chart recording devices may become necessary to document compliance with the temperature requirements of this license. Should the Bureau of Air Quality determine that continuous recording devices are necessary, the licensee shall, within 120 days, demonstrate that continuous recorders have been installed and are operational.

A-546-71-D-R **9**

Departmental
Findings of Fact and Order
Air Emission License

(28) Rockwood shall pay the annual air emission license fee within 30 days of **January 31st** of each year. Pursuant to 38 MRSA §353-A, failure to pay this annual fee in the stated timeframe is sufficient grounds for revocation of the license under 38 MRSA §341-D, subsection 3.

(29) The term of this order shall be for five (5) years from the date of signature.

DONE AND DATED IN AUGUSTA, MAINE THIS DAY OF 2003.
